

The SARS BAR.....SUN setting Timetable

Count the finger widths between the sun and the horizon. Each finger is equivalent to fifteen minutes, with each hand totaling an hour. When the sun dips low enough that only two hands fit. It's time to search for a suitable campsite, or make your way back to the Car & Parking lot.

This works fine for Michigan, but you will have to make adjustments just a bit, depending on where you are at in the world. Closer to the equator or the Poles, and the Sun will linger a bit longer as it sets.
